FAQ, Fit, and Boundaries

AI for the People — FAQ, Fit, and Boundaries

Is AI for the People free?

Yes. It is the free public resource side of DWAI.

What do I need?

Day one needs one AI chat tool such as ChatGPT, Claude, Gemini, or similar. The full developer path later adds an editor, Terminal, Git, code, APIs, tests, and optional owner-approved AI API keys.

Do I need to install agents?

No. Beginner "agents" are role prompts: Capture, Research, Draft, Review, and Update. They do not have authority to act for you.

What should I not paste?

Before you paste anything into an AI tool: use placeholders for names and private details. Do not paste passwords, API keys, 2FA codes, recovery codes, private tokens, card details, medical records, legal documents requiring advice, regulated financial records, customer data, or sensitive account access.

What can AI help with?

Thinking, drafting, organizing, researching, reviewing, learning, planning, coding practice, debugging, writing tests, reading diffs, sketching APIs, building small AI apps, creating RAG prototypes, and checking owner gates. The human still reviews and approves risky action.

What can AI not do for me?

It should not make final decisions, send messages, publish, spend money, change accounts, delete data, deploy code, bypass security, or make regulated claims on your behalf.

When does DW AI Studio fit?

After you understand the free resources and have one real workflow that needs custom mapping, context, prompts, review gates, or implementation support.

Is there checkout or public pricing here?

No. Studio is email enquiry only unless DW AI Studio explicitly changes that later.

Important boundary

DWAJ shares practical AI and AI-developer-path resources for thinking, drafting, organizing, researching, reviewing, learning, coding, debugging, testing, building small AI apps, and shipping owner-controlled projects. This is not therapy, counselling, diagnosis, ADHD or addiction treatment, medical advice, legal advice, financial advice, tax advice, crisis support, regulated professional advice, or a guarantee of clarity, productivity, income, saved time, business results, jobs, clients, or any personal outcome. AI outputs are drafts. The owner approves risky action.

How to use this download

Use this resource for: What this is, what it is not, what not to paste, what stays free, and when optional Studio help may fit.

- If you are new, start with the 20-Minute AI Starter Workflow, then use the full book and workbook as your main path.
 - Keep the Owner Approval Checklist nearby before acting on anything risky.
 - Use PDF for reading/printing, HTML for browser reading, and Markdown/TXT for AI study sources where available.
 - Treat AI outputs as drafts. Use PASS / HOLD before money, accounts, public posts, deletes, deploys, customer/private data, code changes, or regulated claims.
-

Optional: learn it with NotebookLM

NotebookLM is a third-party Google tool. If you use it, upload only public DWAJ downloads or copied public resource URLs. Do not upload private notes, secrets, customer data, account screenshots, or completed workbook pages.

1. Create or open a NotebookLM notebook.
2. Add the public DWAJ PDFs, Markdown files, or public resource page URLs as sources.
3. Ask NotebookLM: "Using only these DWAJ sources, explain the path in plain English, make me a 7-day study plan, quiz me, and flag anything involving secrets, accounts, money,

public posting, deletion, deployment, customer or private data, code changes, or regulated claims as HOLD."

4. If your NotebookLM account has **Video Overview**, generate one for a video-style walk-through. If Video Overview is not available, use Audio Overview, briefing docs, study guides, or source-grounded Q&A instead.
5. Check NotebookLM's answer against the source citations before acting. AI study aids are drafts, not owner approval.

Do **not** upload completed workbook pages, context cards, customer/private data, private business records, passwords, API keys, 2FA or recovery codes, medical, legal, financial, tax, crisis, or sensitive personal details unless you have intentionally replaced them with placeholders and accept the tool's data terms.
